

CALM PIPE®

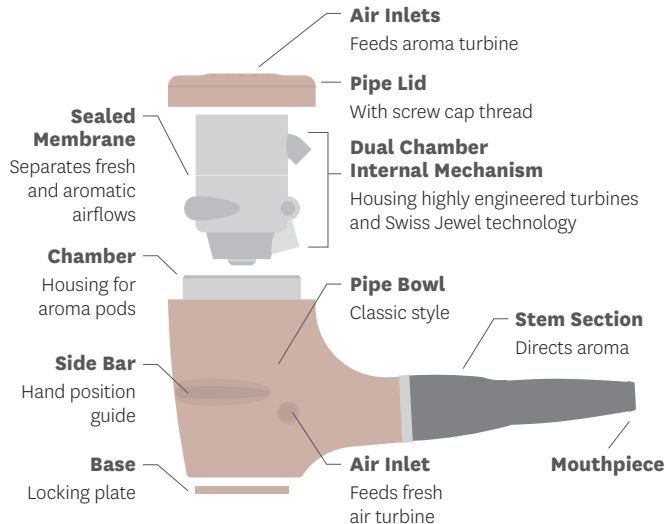

CALM PIPE®  
a breath of fresh air

Calm Pipe™ is a highly engineered New Zealand made innovation to encourage healthier habits and better breathing.

Calm Pipe™ simply uses the power of your own breathing action to drive an air turbine mechanism inside the pipe bowl (no batteries or heating coils). It works by drawing fresh air through the pipe, into your lungs, while sending a smaller, targeted flow of aromatic air towards your nose.

Pipe aromas are personalised to you, allowing enjoyment close to others. This integral design creates a positive pastime without fear or guilt.

Our aromas have been developed using the highest-grade food extracts, essential oils and carrier oils, to give you a pure and naturally boutique experience.

## USER INSTRUCTIONS

- 1 For aromatic air, use a Calm Pipe™ aroma pod
- 2 Remove foil layer off top and bottom of pod, leave netting on
- 3 Unscrew pipe lid, insert pod and screw pipe lid back on
- 4 Comfortably hold pipe, keep air vents uncovered
- 5 Steadily draw a long breath of air through mouthpiece, like sucking through a straw.  
**Note:** Never blow into the pipe
- 6 Fresh air is directed into the pipe bowl, through the mouthpiece and into your lungs
- 7 A separate airflow will pass through the pod, delivering aromatic air to your nose
- 8 Relax and expand your diaphragm while drawing air. Focus on your breathing powering the fans
- 9 Between pipe draws, steadily breathe through your nose
- 10 Gradually start using your pipe for 1 – 2 minutes, a few times each day. Increase the frequency and length of use to suit your lifestyle. Before and during use, follow the safety guidelines.

## SAFETY GUIDELINES

**Warning:** Calm Pipe™ aroma pods should not be used if you have a history of allergies. You can instead use the pipe without an aroma pod. Calm Pipe™ aroma pods contain natural essential oils and food extracts which some people may have allergies to. Before use, read all supplied aroma information first and decide if the aroma fragrance is safe for you.

Prior to use always consult a medical practitioner if you have any allergies or medical conditions.

Stop using immediately if experiencing any adverse reactions and consult a doctor.

People who suffer from fragrance or food sensitivity should be cautious when using this product. Seek advice before use if pregnant or if you have a medical condition which prohibits the use of essential oils or fragrances.

Be cautious when using the product around those who may have high sensitivity or allergies to fragrances.

Start off only using the aromas for a short period of time.

Never leave aroma pods or pipes accessible to children, vulnerable people or pets. Pipe parts and pods could be a choking hazard.

Do not heat or ignite the pipe as it will melt. Do not heat or light the aromas.

If using your pipe with aromas, use only aroma pods. Use of other liquids or substances will void the terms of use and may damage or break this finely tuned mechanism.

# CLEANING

We recommend you clean your pipe as needed and only as directed. Use a dish soap and warm water solution with a paper towel or cloth.

## Outside Pipe

---

Wipe clean the entire outside of your pipe.

## Inside Pipe

---

Gently wipe clean the inside of your pipe bowl (where the aroma pods sit). Never submerge or pour water into your pipe bowl.

## Mouthpiece

---

To clean the mouthpiece, hold the pipe in a vertical position, with the mouthpiece pointing down. Carefully dip the mouthpiece vertically in cleaning solution, stopping before you reach the aroma outlet on the stem, then withdraw from the liquid. Ensure the mouthpiece has fully drained.

## MAINTENANCE

### Residual Aromas

---

During use, residual aromas may be detectable when changing aromas. To avoid the residual aromas we recommend using a secondary pipe. Wiping the pipe bowl clean (see page 6) should reduce residual aromas.

### Specialised Mechanisms

---

We strongly recommend not unscrewing any parts other than the pipe lid. The moving mechanisms inside the pipe are finely engineered and balanced. These are high-quality components, but over time, normal wear and tear may affect efficiency. If you believe you have received a faulty pipe please see our terms of trade online and contact us.

### Eco Plan

---

Our pipes are not yet compostable (we're working on it), please dispose of properly at the end of their life. Aroma pods and packaging are home compostable. Please recycle or reuse your Calm Pipe™ box and tin.
